# UNLOCK THE HIDDEN VALUE IN YOUR PROJECT DATA

In the energy sector, project teams often leave valuable data untapped—buried in countless spreadsheets, PowerPoint presentations, paper files, and siloed systems. As teams shift and multiple projects run in parallel, reporting standards drift, formats vary, and critical insights are lost over time—leading to repeated mistakes, higher costs, and delayed schedules.

**Mithril Advisory helps energy companies transform scattered, messy data into AI- and ML-ready assets**—turning historical project information into a true competitive advantage. By unlocking and standardizing your project data, we enable faster AI adoption, deeper operational insights, and stronger outcomes on every future project.

# MITHRIL
## ADVISORY

# REAL AI USE CASES THAT DELIVER VALUE

- Cost & schedule-overrun early-warning models
- Shift-level labor productivity forecasting
- Predictive analytics for structural fatigue hot spots
- Procurement lead-time & cost risk prediction
- Computer-vision QA for welds / coatings
- Contract-clause risk extraction
- HSE near-miss risk scoring
- Subcontractor performance & claims analytics
- Digital lessons-learned assistant
- Tender win-probability scoring
- Digital-twin QA

# OUR THREE STEP ENGAGEMENT MODEL

**1.**

## Data Maturity & Value Assessment

We evaluate your data assets and infrastructure to uncover high-impact opportunities for cost savings, efficiency gains, and AI readiness

**2.**

## Tailored Roadmap & Use Cases

Working closely with your team, we build a customized AI roadmap —prioritizing use cases and delivering hands-on support to accelerate time to value

**3.**

## Rapid Scaling & Capability Building

We provide expert talent on demand to strengthen your in-house data capabilities, manage critical assets, and scale your AI initiatives faster
